

js-transition-perf-measures

Alex Masselot

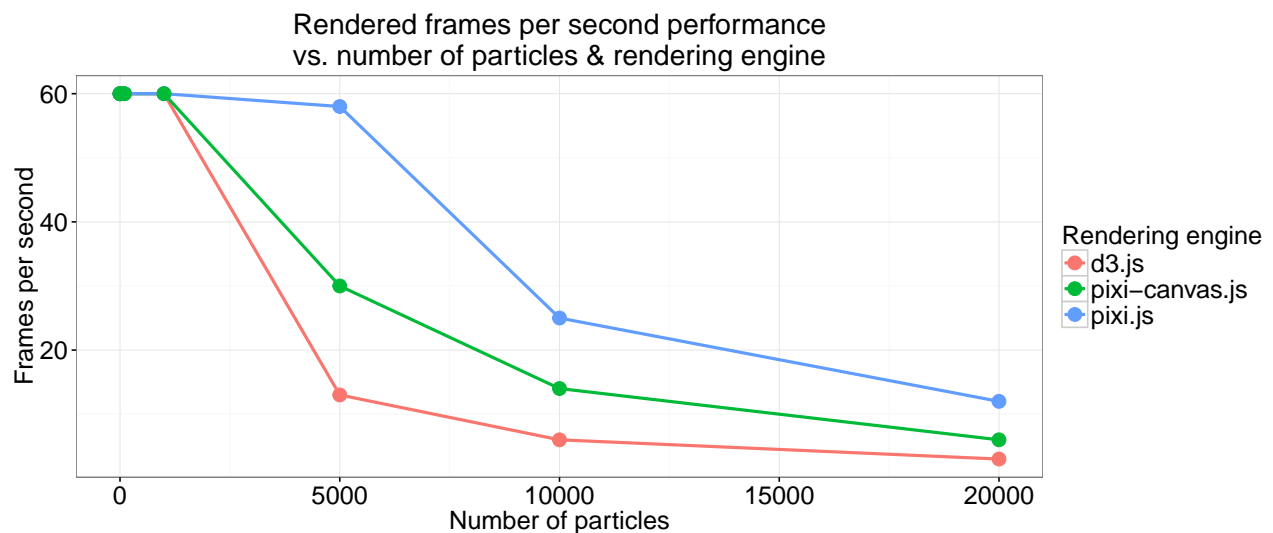

12/23/2016

```
library(ggplot2)
```

You can also embed plots, for example:

```
dt.cycle.times = read.delim('data/cycle-times.txt')
dt.perf = read.delim('data/perf-data.txt')
dt.perf$engine=paste(dt.perf$engine, '.js', sep='')
dt.perf$is.transparent = dt.perf$opacity < 1
dt.perf = subset(dt.perf, browser == 'chrome')
```

```
.dt = subset(dt.perf, ! is.transparent)
dt.process.unit = rbind(
  data.frame(engine=.dt$engine,
    n=.dt$n,
    usage=.dt$cpu,
    process.unit='CPU'
  ),
  data.frame(engine=.dt$engine,
    n=.dt$n,
    usage=.dt$gpu,
    process.unit='GPU'
  )
)
```

```
dt.cycle.times$nb.particles = factor(dt.cycle.times$nb.particles)
q = ggplot(dt.cycle.times, aes(factor(nb.particles), cycle.time)) +
  geom_hline(yintercept = 1000, linetype='dotted', lwd=1)+
  geom_boxplot(aes(colour=engine)) +
  ylim(c(800, max(dt.cycle.times$cycle.time))) +
  theme_bw() +
  theme(
    plot.title = element_text(size = rel(1.6)),
    legend.title = element_text(size = rel(1.4)),
```

```

legend.text = element_text(size = rel(1.4)),
axis.title = element_text(size=rel(1.4)),
axis.text = element_text(size=rel(1.4)),
axis.text.x = element_text(angle=45, hjust=1)
) +
geom_label(x=7,
           y=950,
           label="optimal cycle time",
           hjust=0.8) +
guides(colour = guide_legend(title = "Rendering engine"))
) +
labs(
  title="Cycle times distribution\nvs rendering engine & number of particles\n(1000ms is perfect cycle",
  x='Number of particles',
  y='Cycle time (ms)'
)
print(q)

```
